

Cyber Threat Analysis Report

Risk Level: HIGH

Summary

The analyzed incident is most closely related to 5 MITRE ATT&CK; techniques. The detected behavior indicates possible execution, persistence, privilege-escalation, stealth activity.

Detected MITRE Techniques

T1059.001

PowerShell

Tactic: execution

Platform: Windows

Similarity: -1.3%

T1027.003

Steganography

Tactic: stealth

Platform: Linux, macOS, Windows

Similarity: -5.9%

T1086

PowerShell

Tactic: execution

Platform: Windows

Similarity: -10.1%

T1546.013

PowerShell Profile

Tactic: privilege-escalation, persistence

Platform: Windows

Similarity: -15.3%

T1569.002

Service Execution

Tactic: execution

Platform: Windows

Similarity: -16.6%

Recommendations

- Audit local administrators.
- Block malicious scripts.
- Check Startup folders.
- Inspect PowerShell logs.
- Inspect Scheduled Tasks.
- Inspect token manipulation.
- Review Registry Run Keys.
- Review administrator privileges.
- Review executed commands.
